Thank you for your participation. Please read the task description below carefully. You may want to read it twice to be clear. After that, start engaging a conversation with the LLM in discussing and collaborating for a most optimal solution. After you both have come to an agreement, click the 'complete' button on the bottom of the screen to finish the session. Your conversation will be saved for the researchers.

Please put in your best effort to generate a genuinely good and effective solution.

Task Description:

Fresno unified school district superintendent, Mr. Johnson is mulling over a new district-wide policy that will address the student-friendly and effective learning environment by utilizing digital technology, specifically iPad. The state governor's office is pushing for "smart classroom" initiative where the governor believes that it will strengthen the student scholastic achievement.

One of the initiative plans is to implement smart technologies such as iPad in K-12 classroom. This includes replacing paperback textbook with iPad. The benefits of using iPad in place of textbook are; 1) student can access dynamic hyper-text, -image, -model, and moving images for better viewing and understanding, 2) student can interact with instructor and other students simultaneously for in-class group collaboration or for homework assignments, 3) it is environment-friendly and more.

On the other side, Parent-Teacher Organization (PTO) is raising a substantial concern about "popcorn brain" syndrome – *growing memory loss by depending too much on digital technologies' data storage service*. This syndrome speaks about how a human brain gradually lose its memory function and capacity as we continue to rely on digital devices in storing and retrieving much of our information. One of the recommendations is to use less of digital devices and technologies to balance the habitual dependency. The PTO is asking a more appropriate, implementable, and effective use of iPad in the light of this concern. Under these circumstances, Mr. Johnson must address both the governor office and the PTO's concern.

To solve this dilemma, Mr. Johnson decided to solicit both teacher's and student's opinions. For the student's opinion, your group is contacted. To recap, here are some questions for your group to deal with: Question: How can we utilize iPad for K-12 students, yet it is not creating too much of popcorn brain syndrome among the students? What are some of your creative ideas? How do you implement the idea(s)?
